

Gabriel Oghenenoghie Patrick

Full-Stack Software Developer · Backend & API Engineer

oghenenoghie@gmail.com · oghiegabriel.com · github.com/oghenenoghie · Nigeria · Open to remote roles

PROFILE

Full-stack developer building production web applications, REST APIs and business systems with Python [Django, FastAPI], Laravel, React and Next.js. My focus is correctness where it matters most: compliance rules held as versioned data, money stored as integer minor units, and access control enforced in the database through Row-Level Security. I have delivered client systems end to end, from schema design to CI/CD and deployment.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, PHP, SQL
Backend	Django, Django REST Framework, FastAPI, Laravel, SQLAlchemy, Alembic, REST API design
Frontend	Next.js (App Router), React, Tailwind CSS, shadcn/ui
Data	PostgreSQL, pgvector, MySQL, Redis, Supabase, Neon, Drizzle ORM
Security	JWT and refresh-token auth, TOTP MFA, Row-Level Security, argon2 hashing, input validation, OWASP practices
DevOps	Git, GitHub Actions CI/CD, Docker, Vercel, Railway, Linux, cPanel/SSH deployment, pnpm monorepos
Testing	Vitest, Django test suite, API testing, CI regression testing
AI	Claude API integration, retrieval-augmented generation (hybrid retrieval, reranking, citations), AI-assisted development

EXPERIENCE

Independent Full-Stack Developer · Freelance & Client Projects · 2024 – Present

- Designed, built and shipped client systems end to end: requirements, data modelling, APIs, UI, security, CI/CD and hosting.
- Delivered 3+ client websites and applications, including an enterprise learning management system and a corporate advisory platform.
- Wrote a SKILL.md engineering guide for each repository, recording architecture decisions, conventions and domain rules so that projects stay maintainable.

IFS LMS · Institute for Fiscal Studies Nigeria (client) · Delivered

Laravel REST API · Next.js App Router · MySQL · GitHub Actions · Vercel · cPanel/SSH

- Built an enterprise learning management system that runs courses, trainers, trainees, schedules, attendance, assessments and training records.
- Implemented multi-tenancy with an Eloquent global scope and a BelongsToSchool trait, plus five roles managed through spatie/laravel-permission.
- Set up CI/CD from GitHub Actions to cPanel over SSH for the API, with the Next.js frontend deployed on Vercel.

GECA Advisory · Corporate advisory & training firm (client) · gecaadvisory.com

Next.js · TypeScript · Supabase · Sanity CMS · Resend

- Built the corporate site: course catalogue, training calendar, services showcase and a careers application flow.
- Added a Supabase-backed admin dashboard, a Sanity CMS for editorial content and transactional email through Resend.

SELECTED PROJECTS

Plutus — Compliance-native HR & Payroll Platform · In progress

Next.js · TypeScript · Supabase · PostgreSQL RLS · FastAPI · SQLAlchemy · pnpm monorepo

- Built a payroll engine for Nigerian statutory schemes (PAYE, pension, NHF, NHIS, NSITF, ITF, WHT). Every rule is stored as effective-dated, versioned data and none is hardcoded.
- Stored all money as integer kobo (bigint) and scaled rates in parts per million, so pay runs have no floating-point drift. Payroll and statutory records are append-only.
- Enforced seven organisation roles with Row-Level Security across 89 tables and required TOTP MFA for super admins. The schema is built from 117 migrations and gated by a two-job CI pipeline.
- Proved an offline desktop edition on embedded Postgres (PGLite) and built a parallel FastAPI backend with session-scoped RLS, deployed on Railway.

Live demo: hr-payroll-wagebook.vercel.app · github.com/oghenenoghie/hr-payroll

Corpus — AI Document Intelligence · Prototype

Python · FastAPI · Next.js · PostgreSQL + pgvector · Claude API

- Built a RAG system that answers questions across a document library, with inline, clickable citations to the source passages.
- Combined hybrid retrieval (vector and keyword) with reranking before generation, which improves how precisely answers are grounded in the sources.

github.com/oghenenoghie/corpus-ai-rag

AnchorShip NL — Marine Engine & Parts Marketplace · In development

Next.js · TypeScript · Drizzle ORM · PostgreSQL (Neon) · Tailwind CSS · Railway

- Building a B2B marketplace for marine diesel engines and spare parts (Wärtsilä, MAN, MaK, Deutz, Caterpillar). It includes part-number search and an admin console.
- The signature feature is exploded-diagram part discovery: hotspots on the diagram link straight to in-stock items.

eCommerce Platform — Headless REST API · oghie-store.vercel.app

Python · Django REST Framework · PostgreSQL · JWT

- Built a DRF backend that powers a headless storefront, covering the product catalogue, cart and checkout, orders and payments behind a JWT-secured API.

School Management System · github.com/oghenenoghie/school-ms

Next.js · TypeScript · PostgreSQL

- Built a multi-tenant platform for Nigerian schools covering student management, exam processing, result generation and fee tracking. Data such as a student's current class is derived from records rather than stored twice.
